

Lubrication recommendation:

Sept 18, 2020

The experience we have had in the top international categories OK, OKJ and KZ, where the engines are really solicited to and beyond their limit, have demonstrated the excellent characteristics of ELF HTX-909 from several point of view:

1. lubrication of the conrod big end and main bearings,
2. lubrication of the piston and ring,
3. reduction of detonation.

Elf HTX-909 is currently the oil used in our racing Dept.

Due to the specific racing conditions and the particular fuels available in the US, IAME has started to recommend the HTX-909 to the US market since two years ago.

We recommend a mixing ratio of 1 liter to 5 US gallons (5.3%).

Best regards,

Andrea Bossaglia
